States/LGAs with Measles Outbreaks (Suspected/Lab-Confirmed), Wks01-41, 2016

Suspected Outbreaks (OBs)=509, Cases=13197
Affected: #States=37 and FCT, #LGAs=397

Lab-confirmed Outbreaks (OBs)=135, Cases=771
Affected: #States=28, #LGAs=126.
(Generated from Measles-Lab Database)

Source: Measles Case-Based database as at 21-Oct-2016 (latest Onset: 16-Oct-2016)

Weekly updates on epidemics in Nigeria: as at 21st October, 2016

1. **Lassa fever update for week 41 as at 21st October, 2016; (Please note that the data reflects the routine reports i.e. all suspected cases including the laboratory positive and negative cases)**

- 1.1. Two suspected cases of Lassa fever with 2 Lab. Confirmed and 2 deaths (100%) were from 2 LGAs (2 States; Bauchi -1 & Kaduna -1) reported in week 41, 2016 compared with zero case at the same period in 2015 (Figure 1).
- 1.2. The two (2) suspected cases were positive for Lassa fever.
- 1.3. Between weeks 1 and 41 (2016), 857 suspected Lassa fever cases with 87 lab-confirmed and 102 deaths (CFR, 11.90%) from 138 LGAs (28 States) were reported compared with 228 suspected cases with 11 lab-confirmed and six (6) deaths (CFR, 2.63%) from 21 LGAs (11 States) at the same period in 2015 (Figure 1).
- 1.4. Between weeks 1 & 53 2015, 430 suspected Lassa fever cases with 25 lab-confirmed and 40 deaths (CFR, 9.30%) from 37 LGAs (14 States & FCT) were reported compared with 989 suspected cases with 110 lab-confirmed and 36 deaths (CFR, 3.64%) from 37 LGAs (13 States) at the same period in 2014 (Figure 2).
- 1.5. Investigation ongoing in affected states. States are enjoined to intensify surveillance.
- 1.5.1. Weekly Lassa fever working group meeting ongoing at the NCDC to assess the current Lassa fever situation in the country.
- 1.5.2. Ribavirin Injectable & Tablets with Personal Protective Equipment (PPE) and other consumables distributed to affected States.
- 1.5.3. The Emergency Operational Centre (EOC) in the Nigeria Centre for Disease Control and Prevention (NCDC)/FMOH was activated and technical supports were provided to affected states during the January – April 2016 outbreak.

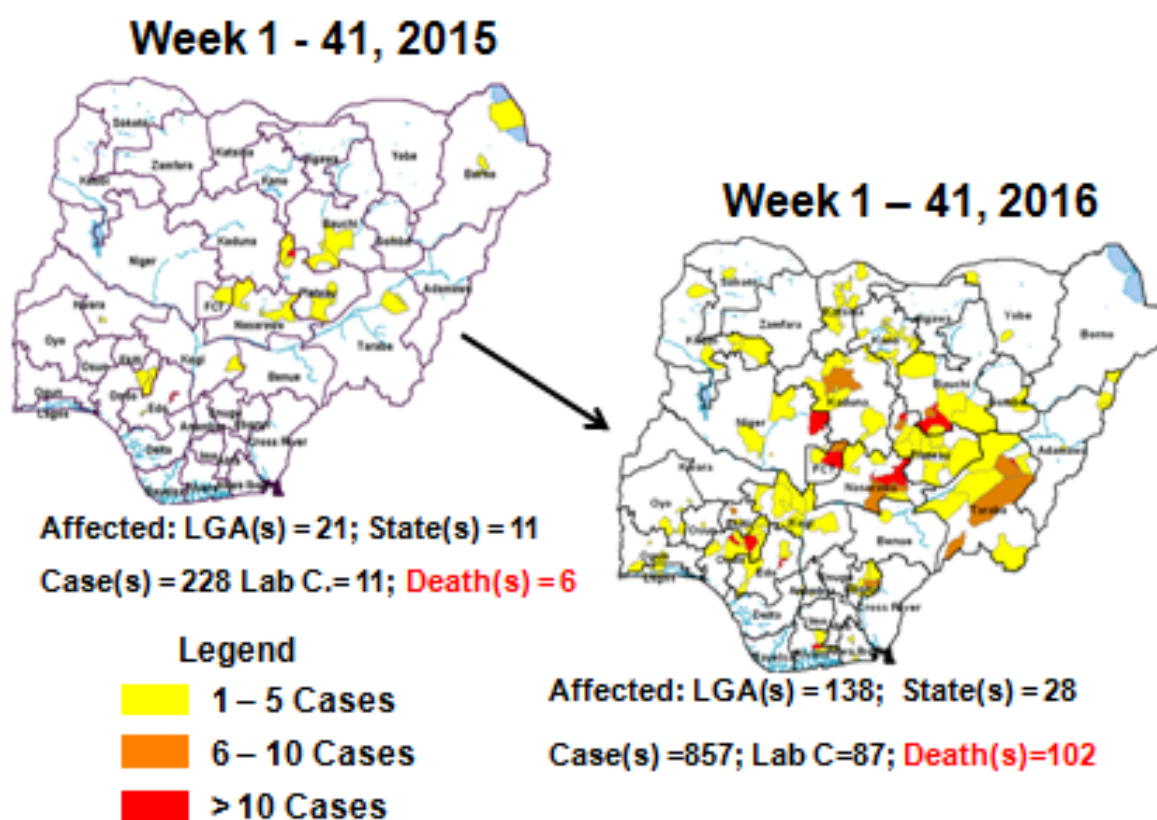

Figure 1: Map of Nigeria showing areas affected by Lassa fever, week 1- 41, 2015 & 2016

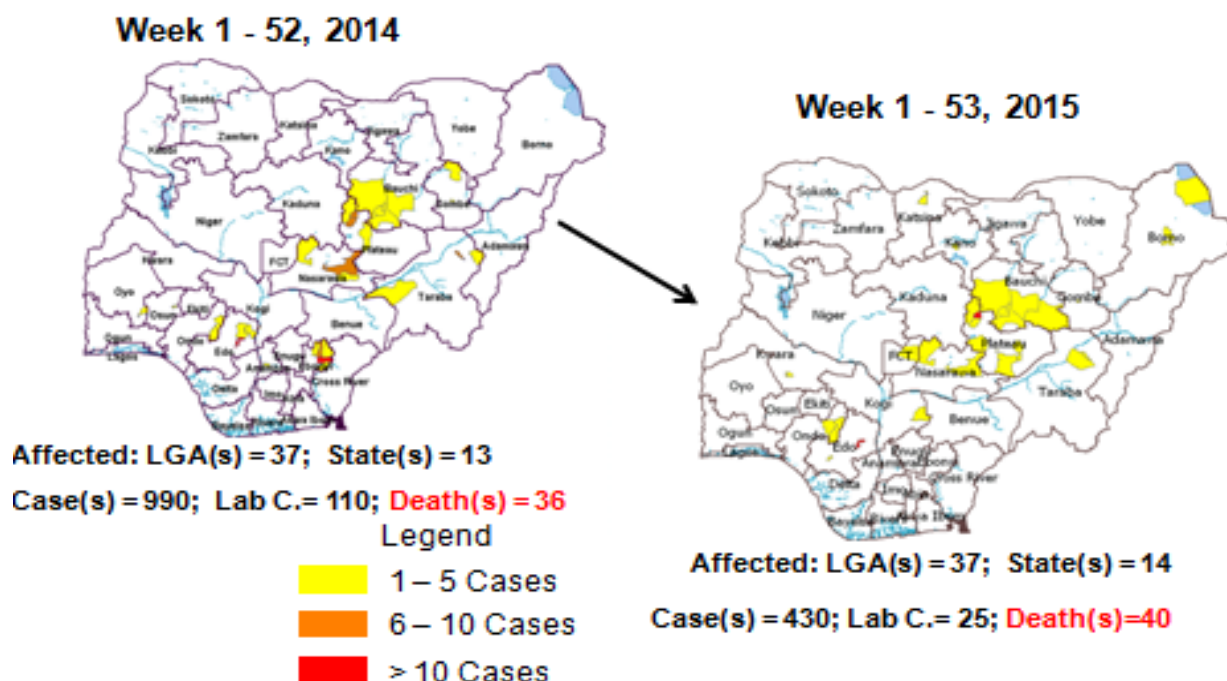

Figure 2: Map of Nigeria showing areas affected by Lassa fever, week 1 - 53, 2014 & 2015

2. Update on suspected Measles for week 41 as at 21st October, 2016

- 2.1. In the reporting week 41 (2016), one hundred & fifty-eight (158) suspected cases of Measles were recorded from 27 States compared with 222 suspected measles cases from 26 States at the same period in 2015.
- 2.2. So far, 23,177 suspected Measles cases and 100 deaths (CFR, 0.43%) have been reported in 2016 from 36 states & FCT (Figure 3 & 4) compared with 20,504 suspected cases and 97 deaths (CFR, 0.47%) from 36 states & FCT at the same period in 2015.
- 2.3. In 2015 (week 1 -53), 24,421 suspected measles cases with 127 deaths (CFR, 0.52%) were reported from 36 States and FCT compared with 15,989 suspected cases with 85 deaths (CFR, 0.53%) at the same period in 2014
- 2.4. Confirmed Measles cases (lab, epi-link and clinical): Between week 1- 41, (2016) 10,721 confirmed Measles cases were recorded compared to 10,611 confirmed at the same time in 2015. (Figure 5). Most affected were within the age group 9 - 59 months (Figure 6 & 7 respectively). Vaccination status of the measles cases was 68.2% zero dose (Figure 8).
- 2.5. Response measure includes immunization for all vaccine-preventable diseases in some selected/ affected wards/LGAs during SIAs with case management.
- 2.6. Measles vaccination campaigns in the Northern and Southern States were conducted from 21st – 25th November, 2015 and 28th January – 1st February, 2016 respectively.

3. Updates on poliomyelitis for week 41 as at October 14th , 2016

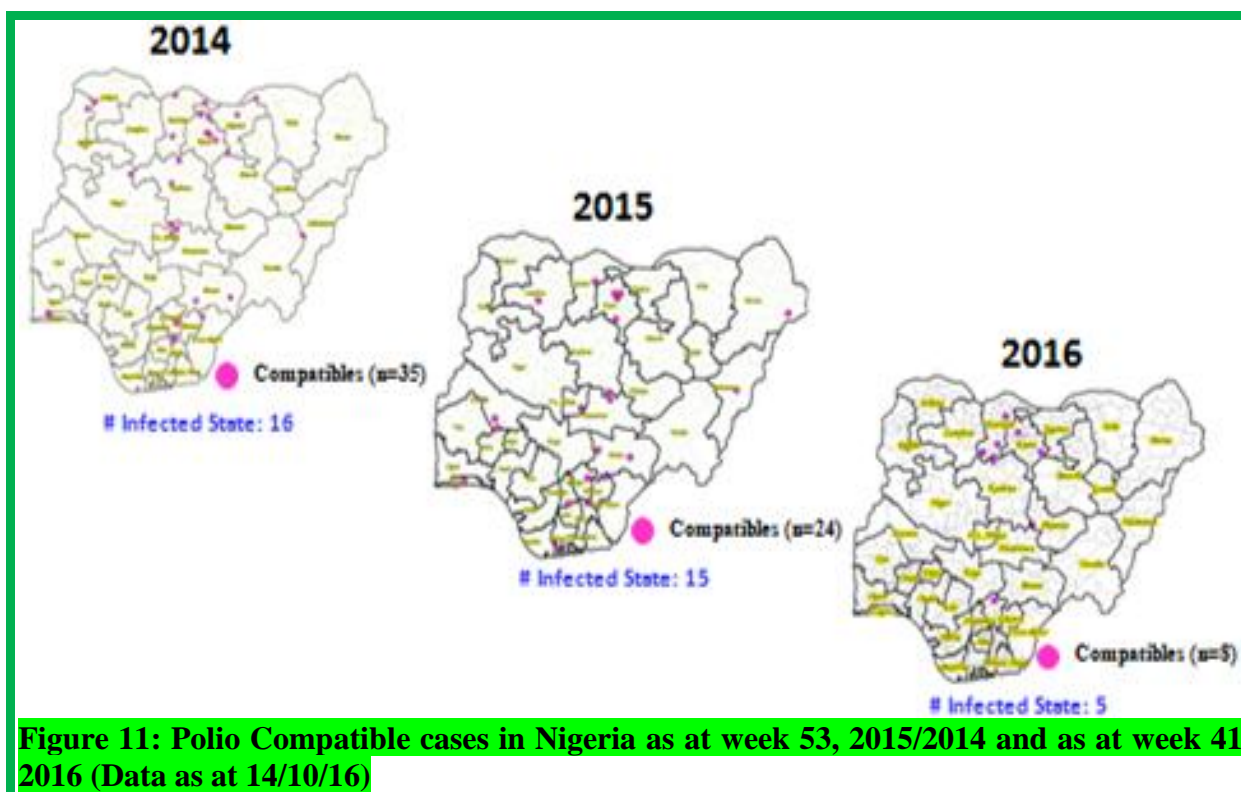

- 3.1. No Wild Polio Virus (WPV) was isolated in both weeks 41 of 2016 & 2015..
- 3.2. Between weeks 1 & 41, 2016, four (4) confirmed Wild Polio Virus (WPV) type 1 were isolated from Jere (1), Gwoza (1) & Monguno (2) LGAs (Borno State) compared to zero case at the same period in 2015 (Figure 9).
- 3.3. Between weeks 1 & 53, 2015 no WPV was isolated compared to six (6) WPVs isolated from 2 States at the same period in 2014.
- 3.3 One (1) circulating Vaccine Derived Polio Virus type 2 (cVDPV2) was isolated in Monguno LGA (Borno State) from week 1 - 41, 2016 compared to one (1) cVDPV2 isolated in Kwali, FCT at the same period in 2015 (Figure 10).
- 3.4 Between weeks 1 & 53, 2015 one (1) cVDPV2 was isolated in Kwali, FCT while thirty (30) cVDPV2 were isolated from 5 States at the same period in 2014.
- 3.5 Six (6) confirmed WPV were isolated in 2014.

In 2016 Environmental surveillance detected 1 cVDPV2 in Borno State and 1 ambiguous vaccine derived poliovirus (aVDPV2) in Jigawa State.

Figure 10: cVDPV distribution in Nigeria for 2015 & 2016 (Data as at 14/10/16)

- 3.6 In response to the isolation of WPV1 in the Country, the Federal Government had immediately made a public notification and developed an outbreak response plan on the 10th August, 2016 with activities commencing from 15th August – 22nd November 2016. (Figure 12)
- 3.7 Investigation was conducted in the 3 affected LGAs (Gwoza, Jere and Monguno LGAs)
- 3.8 First and second outbreak response supplemental immunizations (House to house, Hit and run, and Health camps) with bOPV were conducted in 5 States (Borno, Yobe, Adamawa, Gombe and Taraba) from the 27th – 30th August 2016 and 18 States (11 high risk states plus Taraba, Adamawa, Gombe, Plateau, Nasarawa, Benue and the FCT from the 17th – 20th September 2016 respectively
- 3.9 From January – May, 2016 (4) Supplemental Immunization Activities (SIAs) for Oral Polio Vaccine (OPV) had been conducted across the country using tOPV .
- 3.10 The SIAs (SNIPDs) were strengthened with the following events:
 - 3.10.1 Immunization for all vaccine-preventable diseases in some selected wards/LGAs.
 - 3.10.2 Use of health camp facilities.
 - 3.10.3 Field supportive supervision and monitoring.
 - 3.10.4 Improved Enhanced Independent Monitoring (EIM) and Lots Quality Assessments (LQAs) in all Polio-high risk States.
 - 3.10.5 High level of accountability framework

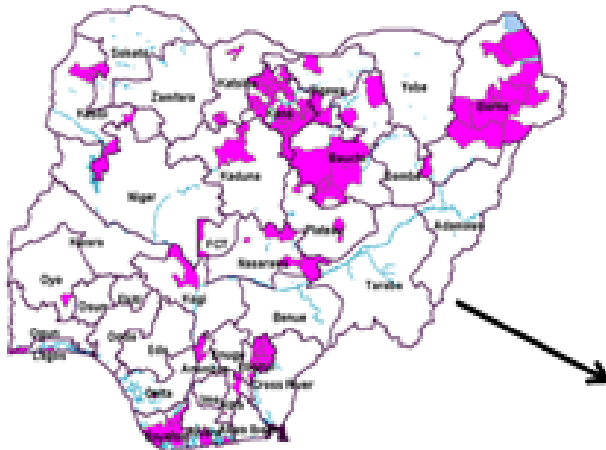

| Outbreak Response Round | Scope | Date | Type of Antigen | Status |
|-------------------------|--|--|-----------------------|-----------|
| Immediate | Borno State (Gwoza, Jere, MMC, Bama and 1 ward in Mafa LGAs) | 15 th – 18 th August 2016 | bOPV2 | Done |
| 1 | Borno, Yobe, Adamawa, Gombe, Taraba | 27 th – 30 th August 2016 | bOPV2 | Done |
| 2 | 11 HR States + Adamawa, Gombe, Taraba, Nasarawa, Benue, Plateau, and FCT | 17 th – 20 th September 2016 | bOPV2 (+IPV in Borno) | Done |
| 3 | 11 HR States + Adamawa, Gombe, Taraba, Nasarawa, Benue, Plateau, and FCT | 15 th – 18 th October 2016 | bOPV2 | Ongoing |
| 4 | Tentative | 12 th – 15 th November 2016 | bOPV2 | Tentative |
| 5 | Tentative | 3 rd – 6 th December 2016 | bOPV2 | Tentative |

Figure 12: Polio Outbreak Response Timelines in Nigeria: August-December 2016

4 Update on suspected Cholera for week 41 as at 21st October, 2016

- 4.1 In reporting week 41 (2016), 6 suspected cases of cholera were recorded from Akinyele LGA (Oyo State) compared with 162 cases with 5 Lab. Confirmed and 6 deaths (CFR, 3.70%) from 11 LGAs (4 States) at the same period in 2015 (Figure 13).
- 4.2 Between weeks 1 and 41 (2016), 560 suspected cholera cases, 15 Lab confirmed and 25 deaths (CFR, 4.46%) from 48 LGAs (12 States) were reported compared with 4899 cases with 28 lab-confirmed and 184 deaths (CFR, 3.76%) from 95 LGAs (19 States) at the same period in 2015 (Figure 13)
- 4.3 Between weeks 1 and 53 (2015), 5301 suspected cholera cases with 29 lab-confirmed and 186 deaths (CFR, 3.51%) from 101 LGAs (18 States and FCT) were reported compared with 35,996 cases with 306 lab confirmed and 755 deaths (CFR, 2.10%) from 182 LGAs (19 States and FCT) at the same period in 2014 (Figure 14).
- 4.4 States are enjoined to intensify surveillance.

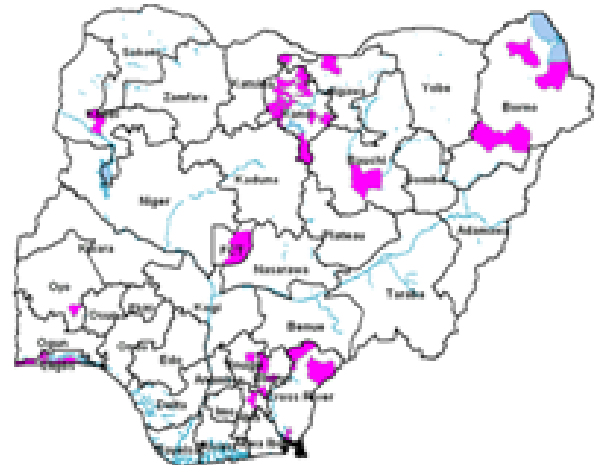

Week 1 – 41, 2015

Affected: LGAs = 95; States = 19

Cases = 4899; Lab C.= 28; Deaths = 184

Week 1 – 41, 2016

Affected: LGAs = 48; States = 12

Cases = 560; Lab C.=15; Deaths=25

 LGAs/States affected by Cholera

Figure 13: Status of LGAs/States that reported Cholera cases in week 1- 41, 2015 & 2016

Week 1 – 52, 2014

Affected: LGAs = 182; States = 20

Cases = 35996; Lab C.= 306; Deaths = 755

Weeks 1- 53, 2015

Affected: LGAs = 101; States = 19

Cases = 5301; Lab C.=29; Deaths = 186

 LGAs/States affected by Cholera

Figure 14: Status of LGAs/States that reported Cholera cases in week 1- 53, 2014 & 2015

5. Update on cerebrospinal meningitis (CSM) for week 41 as at 21st October, 2016

- 5.1. In the reporting week 41 (2016), 11 suspected cerebrospinal meningitis (CSM) cases were reported from 7 LGAs (5 States) compared with 7 cases from 6 LGAs (3 States) at the same period in 2015.
- 5.2. Between weeks 1 & 41 (2016), 733 suspected CSM cases with 39 Lab. confirmed and 30 deaths (CFR, 4.17%) were recorded from 142 LGAs (30 States) compared with 2663 suspected cases with 43 Lab. Confirmed and 130 deaths (CFR, 4.88%) from 159 LGAs (28 States) at the same period in 2015 (Figure 15).
- 5.3. Between weeks 1 & 53, 2015, 2711 suspected CSM cases with 43 lab-confirmed and 131 deaths (CFR, 4.83%) were recorded from 170 LGAs (28 States and FCT) compared with 1175 suspected cases and 81 deaths (CFR, 6.89%) from 125 LGAs (26 States and FCT) at the same period in 2014 (Figure 16)
- 5.4. Timeliness/completeness of CSM case-reporting from States to National Level (2016 versus 2015): on the average, 85.80% of the 26 endemic states sent CSM reports timely while 99.4% were complete in week 1 – 41, 2016 as against 81.3% timeliness and 98.2% completeness recorded within the same period in 2015.
- 5.5. Intensive Surveillance is on-going in high risk States.

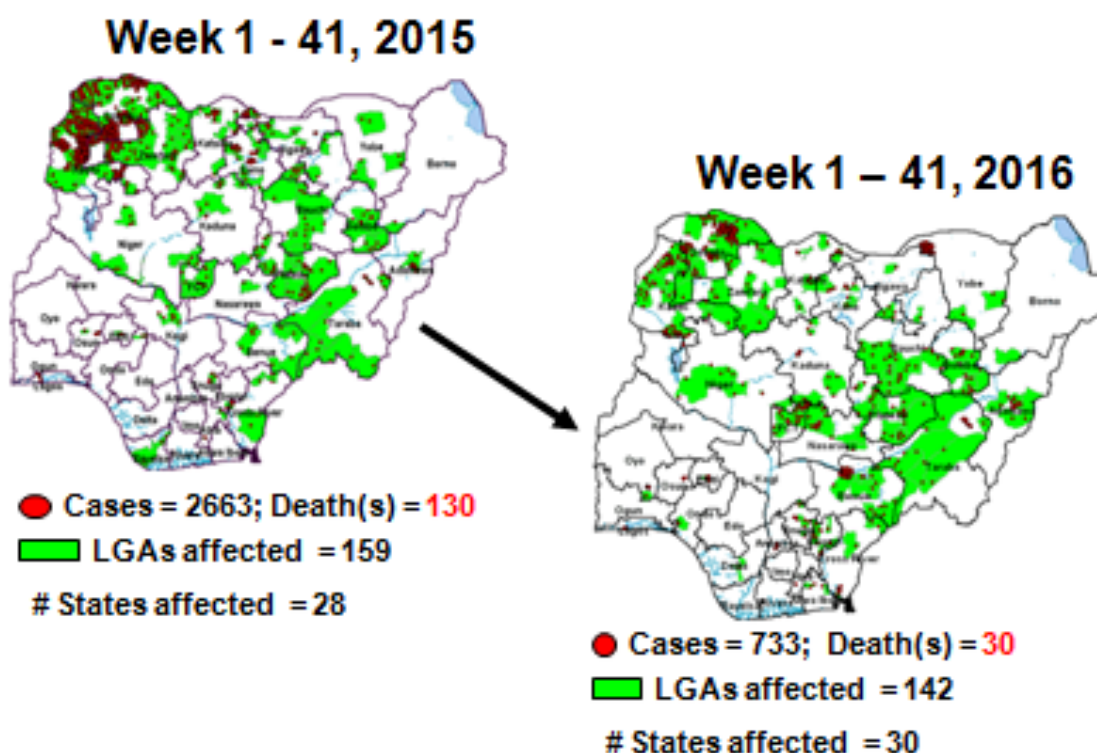

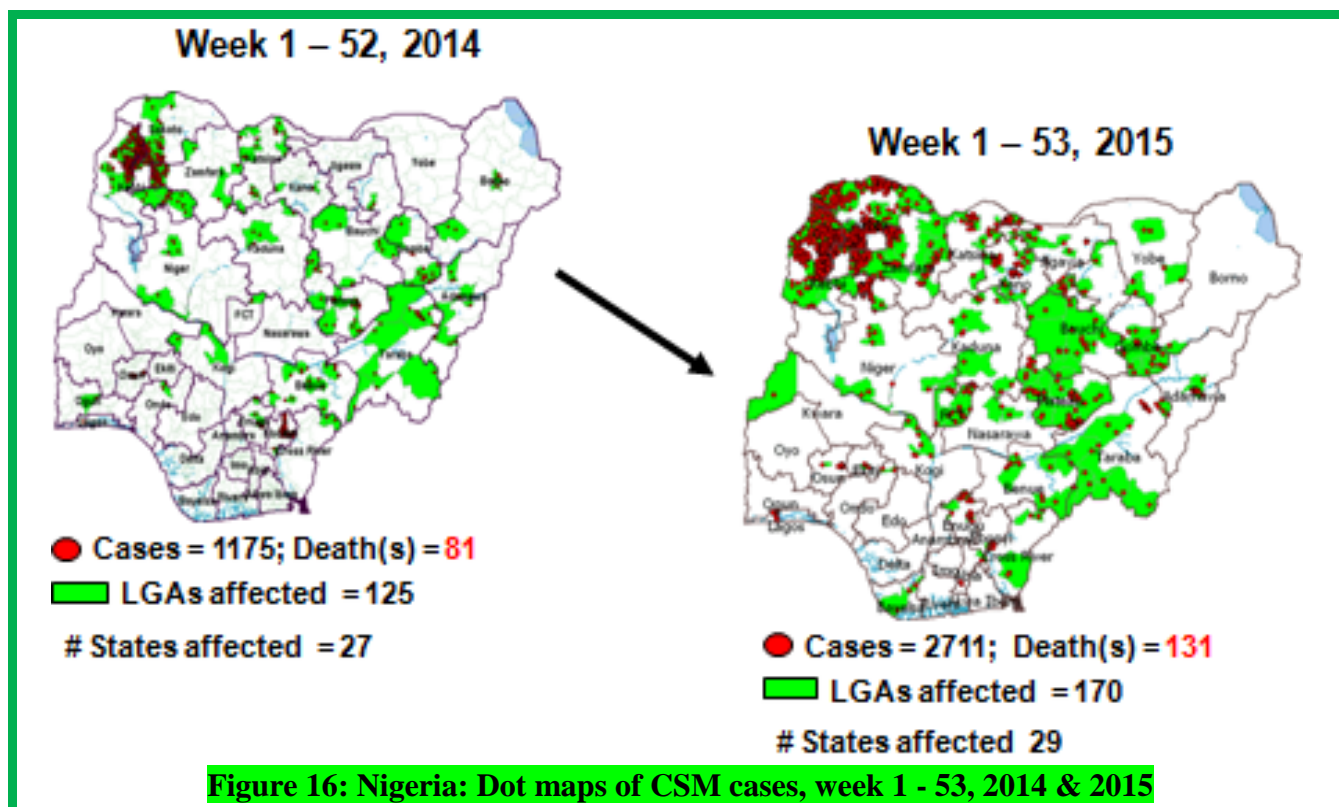

Figure 15: Map of Nigeria showing areas affected by CSM, week 1 – 41, 2015 & 2016

6. Update on Guinea worm disease: as at 30th September, 2016

- 6.1. As at 30th September, 2016, 185 GWD rumour reports were received from 71 LGAs in 16 States. All (100%) of the rumours were investigated within 24 hours and none of these rumours were confirmed to be GWD case.
- 6.2. In 2015, a total of 384 GWD rumour reports were received and investigated from 134 LGAs (24 States), of which 373 (97%) were investigated within 24 hours. None of these rumours were confirmed to be GWD case.
- 6.3. Nigeria has celebrated 7 consecutive years of zero reporting of Guinea worm disease in the country. **The Country has been officially certified free of Dracunculiasis transmission by the International Commission for the Certification of Dracunculiasis Eradication (ICCDE).**
